

Prevent Plagiarism in Your Work

iThenticate is one of the best plagiarism detection tools widely used by leading publishers worldwide. It applies text-matching algorithms to compare the full text of a given manuscript with a growing number of published scholarly works and web content. As an author you can ensure that you have sufficiently cited your sources. As a reviewer iThenticate supports you to verify that text sections have been quoted, summarized or paraphrased properly, and it helps you to detect potential plagiarism.

Access to iThenticate has been exclusively licensed for all Max Planck users. Please note that iThenticate is a hosted third party service. So you need to upload your documents to the company's servers. You will find more information in „MPG FAQs“ on our website.
